Survey 0416H

PROGRAMME

9-18 April 2016

Ports

Loading: Kinlochbervie: 09 April 2014

Unloading: Kinlochbervie: 18 April 2014

In setting the survey programme and specific objectives, etc the Scientist-in-Charge needs to be aware of the restrictions on working hours and the need to build in adequate rest days and rest breaks as set out in Marine Scotland's Working Time Policy (Lab Notice 34/03). In addition, the Scientist-in-Charge must formally review the risk assessments for the survey with staff on-board before work is commenced.

In the interest of efficient data management it is now mandatory to return the Survey Report, to I Gibb and the Survey Summary Report (old ROSCOP form) to M Geldart, within four weeks of a survey ending. In the case of the Survey Summary Report a nil return is required, if appropriate.

Personnel

J Mair (SIC)
R Gillespie-Mules
SFF Observer

Estimated Days Per Project: 10 days – RV1609 (20384)

Fishing Gear: Anglerfish Trawl BT 195

Objectives

1. To undertake a co-ordinated demersal trawling survey of anglerfish species on the continental shelf and slope to the North and West of Scotland.
2. To obtain temperature and depth profiles at each trawling station.
3. To record and map distributions of megrim, four spot megrim and cod.

Procedures

This trawl survey follows a set of protocols drawn up by an industry science survey planning group made up of Marine Scotland scientists and fishing representatives. These protocols share much in common with the sampling regimes described in Marine Scotland standing instructions for demersal trawl surveys.

The survey track and sampling locations will be delivered to the skipper prior to departure.

Normal contacts will be kept with the laboratory.

Trawling

One haul of 60 minutes duration will be made at each sampling station; trawling operations will occur in waters up to a maximum of 1000 m. The Scanmar system will be used to monitor wing spread, door spread and distance covered during each haul. A bottom contact sensor will be mounted on the footrope.

Catches will be worked up according to the protocols for Marine Scotland anglerfish surveys which are similar in principle to Marine Scotland standing instructions.

Marine Scotland's Working Time Policy will be observed throughout the survey. A maximum of 13 hours will be worked per 24 hour period. Where possible work will be limited to between the hours of 06:00 and 00:00 hours.

Hydrography

A DST will be deployed on the trawl at each station to monitor depth and temperature.

Post Survey

All scientific equipment will be unloaded on 19 April.
